Abstract (en)

[origin: EP2261561A2] The plate has a rear side comprising partial cylindrical recesses (6) and a flat groove (7) extending in longitudinal direction of the plate. The flat groove is formed along a longitudinal extension side (7a) for receiving a plate holder (15) with a cross sectional profile. A holding segment (8) is inserted in another longitudinal extension side (7b) of the flat groove under maintenance of a distance to the former longitudinal extension side. An undercut recess (11) projects from upper side, which is turned towards a groove bottom, of a holding segment for receiving another plate holder (16). An independent claim is also included for a pipe wall lining comprising a fireproof plate.
