Abstract (en)
[origin: WO2009144426A2] The invention relates to an accessory (1) for a suction device (2) that comprises a hollow body forming a suction head (10) provided with a nozzle (11) connecting to said suction device, said head including a mouthpiece opening (3), said accessory also comprising a comb (4) disposed inside said suction head as well as a hair-clearing member (6). According to the invention, the comb is pivotally mounted between one so-called active end position, in which the teeth of the comb project from the mouthpiece opening, and an inactive end position, in which the teeth of the comb are retracted into the suction head, said clearing member being pivotally mounted inside the suction head, and said accessory comprising an actuating mechanism that pivots the comb, and which is distinct from the clearing member. The invention also relates to a suction assembly comprising such an accessory.
