Abstract (en)
[origin: WO2009121562A1] The invention relates to a device for machining workpieces, particularly band or plate-shaped metal workpieces, having circumferential continuous means (26), on which a machining element (27) that can be moved past the workpiece is accommodated for knocking off material regions of the workpiece. According to the invention, the machining element (27) is disposed on the continuous means (26) by way of a bending section (29) such that the machining element (27) may yield to the side upon striking against the workpiece.
