Abstract (en)
[origin: WO2009112886A1] The rotary tablet press (1) comprises a housing (2) including a compression section (6), and a rotary turret (12) including a die disc (15), a top punch guide (29), a bottom punch guide (30) and a spindle (33) defining an axial direction. The turret (12) is positioned in the compression section (6) in a position of use of the rotary tablet press, and may be moved to a removal position. This is achieved by means of quick separation means allowing separation of at least the top punch guide (29) from the die disc(15) and the bottom punch guide (30) in the compression section (6) following which the die disc(15) and/or other parts may be moved out of the compression section (6).
