Abstract (en)
[origin: WO2009112574A1] The present invention relates to a folding box (1) for carrying, wherein the cover (3) is constructed of an upper plane and a lower plane, wherein a first handle can be folded out from the upper plane and a second handle can be folded out of the lower plane in opposite directions so that the two undersides of the handles lie directly opposite one another in the folded-out position and together form the carrying handle (2) for carrying the folding box for carrying; and wherein the punch-out of the handle from the lower plane of the cover (3) forms an opening into the interior of the folding box for carrying, said opening being closeable by a closing lid punched out at the upper plane of the cover.
