Abstract (en)
[origin: WO2008104987A2] A dispensing spout for dispensing pourable contents from a package is described. The spout comprises a shaft having a mouth at its distal end and a flange extending radially around an aperture at its proximal end. The spout is characterized by the flange having an adhesive layer upon its underside for retrofitting the spout to an outer surface of the package. Pourable contents are dispensable from the package in a controlled manner after puncturing the surface of the dispensable package through the aperture.
