Abstract (en)
[origin: WO2009108998A1] The present disclosure provides a tactile marker that is formed at least predominantly from a plastics material and which comprises a head portion that is arranged in use to sit on a walkway surface and a depending stem that is formed integrally with the head portion and is arranged in use to locate as a press fit within a hole in the walkway. The depending stem is formed along at least a portion of its length with a plurality of barbs, and each barb has a generally annular land and a generally conical portion formed integrally with the land. The generally conical portion has a cross-section that reduces in diameter in a direction away from the head portion.
