Abstract (en)  
[origin: WO2009109565A2] In order to refine a switch device (100; 100') for a household appliance, comprising: at least one switch shaft (10) configured for regulating at least one power of the household appliance, said switch shaft extending from the outside of the household appliance into an interior of the household appliance, at least one power range marking (30; 30'; 30'') visible on the outside of the household appliance and disposed at least in some regions around the switch shaft (10), said marking representing the value range of the power that can be regulated by means of the switch shaft (10), and at least one illuminating unit (61, 62, 63, 64, 65, 66) disposed in the interior of the household appliance for illuminating the power range marking (30; 30'; 30''), such that the power of the household appliance, such as a burner, an oven, or a stove, can be regulated more precisely and easily, it is proposed to dispose at least one indicator (40) for displaying the power state of the household appliance set by way of varying the position or orientation of the switch shaft (10) such on the switch shaft (10) that the indicator (40) follows any change in position or orientation of the switch shaft (10), and that the indicator (40) is located in each case in the beam path of the light emitted by the illuminating unit (61, 62, 63, 64, 65, 66) for the region (50) of the power range marking (30; 30'; 30'') associated with the current position or orientation of the shift shaft (10).
