Abstract (en)

[origin: EP1557222A2] A pipetting device comprises a base body; attachment(s) (34) protruding from the base body mounted axially movably on the base body to mount a pipette tip, a spring (24) where the attachment is supported on the base; a stop associated with the attachment; and an ejection device to release the pipette tip from the attachment that has throw-off device associated with the attachment. A pipetting device comprises a base body, attachment(s) protruding from the base body mounted axially movably on the base body to mount a pipette tip, a spring where the attachment is supported on the base, a stop associated with the attachment beyond where the attachment protrudes axially when it is not loaded toward the spring, and an ejection device to release the pipette tip from the attachment that has throw-off device associated with the attachment. The attachment and throw-off device are movable relative to one another and comprise a drive device cooperating with the throw-off device and/or the attachment for the relative movement of the throw-off device and attachment.
