Abstract (en)
[origin: EP2264268A2] The lock (22) has a case ejector (68), and a control slide (36) that is movable parallel to a shield (34). A case ejector drive (44) is driven by the control slide, and an entry slide (98) is arranged for a connection rod. The case ejector is shifted and the entry slide is driven, during actuation of the control slide. A coupling element temporally drives the entry slide in delay manner during actuation of the control slide. The control slide exhibits an open loop and an attachment section, where the loop and the section are arranged opposite to the coupling element.
