Abstract (en)

[origin: WO2009144425A2] The invention relates to an accessory (1) for a suction device (20), including a hollow body forming a suction head (10) that has a mouthpiece opening (3) and which is provided with a connecting nozzle (11) for directly or indirectly connecting the accessory to said suction device, said accessory also comprising a comb (4) embedded inside the suction head and a member (6) for clearing out hair. According to the invention, the comb and the clearing member are pivotally mounted between two so-called active and inactive positions, and said accessory comprises an actuating mechanism formed from at least one non-extensible, deformable cable connected to the comb or to the clearing member and to a powering member for said cable. The invention also relates to a suction assembly including such an accessory.
