Abstract (en)  
[origin: WO2009111829A1] A result generator for a gaming system comprising: one or more dice, each die having a plurality of facets each facet provided with an identification circuit having a readable identification code which is unique within the random number generator; a support platform having an upper surface for supporting the dice while at rest; an agitator adapted to cause mechanical movement of the dice to generate a random dice roll result; a dice reader disposed below the upper surface of the support platform comprising a plurality of electronic detectors adapted to read the identification code of each dice facet resting against the upper surface of the dice support platform to determine the dice roll result.
