Abstract (en)
[origin: WO2009130236A1] The invention provides a toy construction assembly, comprising elongate members which may be interconnected and using which an infinite number of -rigid spatial structures may be erected. The elongate members comprise a rigid central part (1) and two opposite flexible ends (2), wherein the connection between different elongate members is realized, without separate connectors, by interconnecting the flexible ends of different elongate members or by connecting a flexible end of one elongate member to the rigid central part of at least one other elongate member.
