Abstract (en)
[origin: WO2009118636A1] The machine (1) for handling various loads, in particular containers in port and interport areas, railway yards or the like comprises an upper perimeter structure (2) which is associated at two side panels (4) with at least a pair of respective vertical side uprights (9), opposite one another and having handling means (10) on the ground, and lifting means (7) which are suitable for lifting/lowering at least a load arranged in the space below the perimeter structure and which comprise at least a first and a second crosspiece substantially horizontal and transversal to the longitudinal direction of the perimeter structure and at a distance the one from the other, each crosspiece having respective grip means (8) of the loads and being associated with elevator means (14) for lifting an?/or lowering with respect to the ground.
