Abstract (en)
[origin: GB2458894A] The invention relates to a platform assembly for providing a level flooring on sloping ground. The assembly comprises a plurality of flooring panels and a plurality of platform legs for supporting each flooring panel. Each platform leg comprises a base plate 2 for contacting the ground, a leg column 24, a pair of super imposed upper and lower wedges 4,6 arranged between the base plate 2 and the leg column, a leg length adjuster 10 and a platform support 12 for engaging the flooring panel. The wedges are tapered in thickness and are rotatable relative to each other such that the leg column can be made vertical even on sloping ground. The length of the leg is also adjustable so that the flooring panels are supported horizontally. Later embodiments relate to a platform leg for use in supporting a flooring panel, a building comprising said platform or leg assembly, and a method of erecting a platform assembly to provide a level flooring on uneven ground.
