Abstract (en)
[origin: WO2009106089A1] The invention relates in particular to a housing system (1) for building coverings (2). To make possible a particularly flexible and multifunctional use, it is proposed that the housing system (1) comprises at least one housing element (3) upstream of the building covering (2) and a shifting mechanism (4, 5). The shifting mechanism (4, 5) is coupled to the housing element (3) in such a way that the housing element (3) can be shifted along the building covering (2) in at least one dimension relative to the building covering (2).
