Abstract (en)

[origin: WO2009115140A1] A fitting for horizontal sliding windows or sliding doors, comprising control elements (4) that influence the movement of the sliding sash or leaf (3), wherein after unlocking the closed position the sliding sash or leaf (3) can be moved perpendicular to the sliding sash or leaf plane thereof and, in a locked open position can be freely displaced along two guides disposed parallel to each other, wherein the control element (4) carrying the sliding sash or leaf (3) is disposed with the plane thereof perpendicular to the sliding sash or leaf plane and comprises control means (5), which are coupled to a driving rod fitting (6), wherein the control means (5) are made of at least one dog (7) attached to the driving rod fitting (6), a control arm (8) that can be coupled thereto and displaced along the sliding sash or leaf plane, and a control arm (10) associated with the deployment arm (9). In order to provide a fitting for horizontal sliding windows or sliding doors, having a cost-effective design and simple installation of a control element, and a simple and exact guidance of the slide with an advantageous actuation of the deployment arm, it is provided that the control arm (8) is associated with a slide (11), which is guided displaceably in a bearing block (12) supporting the deployment arm (9) and the control arm (10).
