Abstract (en)
[origin: WO2009115151A1] The invention relates to a component pairing (1), comprising a first component (2) and at least one second component (3) adjustable relative to the first component (2), wherein a gap (6) is formed between the components (2, 3), said gap being connected to a first chamber (7) containing a first medium (8) and a second chamber (9) containing a second medium (10). According to the invention, at least one oscillating exciter (11) is provided in the gap (6) for producing a pressure increase of the first and/or of the second media (8, 10). The invention further relates to a device having a component pairing (1).
