Abstract (en)  
[origin: WO2009112881A1] The invention relates to an electrical terminal system (3), comprising at least one cable (20) comprising a stranded wire; at least one elongated terminal (10) for reception of the cable, which terminal has a contacting portion for electrical and/or mechanical connection and a welding portion (12) for electrical connection between the terminal and the stranded wire. At the free end of the cable the stranded wire is compacted and welded into an essentially solid portion (23); and said essentially solid portion (23) is welded directly to the welding portion (12) of the terminal to achieve electrical continuity therebetween.
