Abstract (en)

[origin: WO2009129821A1] The invention relates to a method for access control for a configuration access (UI) to a device (G), wherein access is provided to the configuration access (UI) by way of a first data connection (LAN), and wherein the configuration access (UI) is protected by at least one primary access control device. In the process, access is provided to the device (G) by way of a second access prior to the use of the configuration access (UI), wherein the configuration access (UI) is released following said second access for a pre-defined time period and after expiration of said time period is blocked again.
