Abstract (en)

[origin: EP2266429A1] The device (1) has a band-like support (2) with an adhesive surface (3) on one of sides, where multiple hairs (5) are fixed at the band-like support. The hairs transversely extend away with respect to the band-like support. The support progressively deforms plastically until two partial lengths (4, 6) of the support lie flat against each other with portions arranged in between on the adhesive surface. A deformable metal insert extends over the entire length of the support. The adhesive surface is provided with a removable cover.
