Abstract (en)

[origin: EP2266435A1] The device (4) has a discharge mechanism with an actuator (8) that is arranged in a guide housing (6) along a guide (9) and fixed in open and close positions. The discharge mechanism includes a latch mechanism with a cam and a control element for fixing the actuator in the close position. The cam is formed at a component that is arranged in a guide housing (6) in displacing direction of a pull-out guide i.e. drawer (1), and is arranged into the guide housing in pull direction by a control element that is fixed in the closing position.
