Abstract (en)
[origin: EP2266451A2] The washer according to the present invention comprises an installation system of a turbofan group, allowing mounting the latter onto the machine base by means of interference fit in a convenient, easy, and firm manner, without requiring the use of any extra apparatus or element. According to the washer of the invention, an outlet of the turbofan is in communication with ambient air by means of an air discharge gap, so that airflow is generated within the machine, drying time is reduced and energy is saved.
