Abstract (en)

[origin: EP2266797A2] The machine has printing machine lines (M1, M2) arranged parallel to each other, where pressure units (DE1, DE2), folding structure with folding cylinders (FT1, FT2) and folding units (FW1, FW2) are assigned to each printing machine line. The printing machine lines are furnished such that printing material strands are alternatively supplied to the folding units that are turned toward the printing machine lines. The printing material strands are developed after longitudinal folding of printing materials by the folding cylinders. Independent claims are also included for the following: (1) a printing product comprising partial products (2) a method for producing a printing product by a printing machine.
