Abstract (en)
A weaving reed (10) includes a pair of upper and lower caps, and a plurality of dents (11) supported at upper and lower ends by the caps. The dents (11) include two types of dents inclined at different inclination angles to a height direction of the reed, as viewed from a side of the reed. The two types of dents three-dimensionally intersect each other in an X-form as viewed from the side of the reed (10). The inclination angles are set in a manner such that a beating position of the dents (11) is located within an area including an intersecting position (P) where the two-types of dents three-dimensionally intersect.
