Abstract (en)

[origin: EP2267384A2] The connector has an adjusting device provided for adjusting a door in an elevation direction and/or a wide direction and/or an inclined direction. The adjusting device has an adjusting element (30), which is fixed at the door via screwing, where adjusting movement is implemented between the adjusting element and a door side fixing element and/or rail side fixing element. The adjusting element comprises two adjusting screws (31, 32) whose heads are coupled at the door side or rail side fixing element in a longitudinal direction in an immovable manner. An independent claim is also included for a house-hold device that comprises a dead-bolt.
