Abstract (en)
[origin: WO2009127423A2] The present invention relates in a first aspect to an element having a non-porous hollow body and a filling wherein the non-porous hollow body is formed of bioresorbable magnesium and/or a bioresorbable magnesium alloy, wherein the filling comprises a biocomposite material, wherein said biocomposite material comprises at least one biocompatible polymer component A and a ceramic component B. In a further aspect the present invention relates to a method for the production of said element, which is particularly suited for application in bone surgery.
