Abstract (en)

[origin: WO2009136065A2] The invention relates to a weapon storage device (10) intended to be attached to an external face (8) of a hull (4) of a submarine (2) and able to contain weapons (14) such as munitions or munition delivery vehicles which are intended to be deployed from the storage device on receipt of a deployment signal transmitted from inside the submarine, characterized in that it comprises a compensation means (16, 18, 30, 40) making it possible partially or fully to compensate for the variation in mass of the storage device (10) as a result of the deployment of a weapon, by replacing a volume of gas initially contained in the storage device with an identical volume of water introduced into the storage device.
