Abstract (en)

[origin: WO2009115438A1] A packaging (10) for containing and protecting a good (1) comprising: a closable outer box (20,30) having a plurality of panels (25,26,27,28,30); and at least two generally facing deformable elongated inner spacers (40) for securing the good (1) within the box (20,30). Each spacer (40) comprises: peripheral portions (41) that are secured to different panels (25,26,27) of the box (20,30); and an intermediate portion (42) that extends between the peripheral portions (41) and that is spaced apart from all panels 25,26,27,28,30) of the outer box. The intermediate portions (42) of the spacers (40) facing each other in the box (10) when the box is closed so that the good (1) is secured inbetween the intermediate portions (42) by forcing them apart, whereby the intermediate portions (42) are deformed in elongation between their respective peripheral portions (41), the intermediate portions (42) forced apart by said secured good (1) remaining entirely spaced apart from all panels (25,26,27,28,30) of the outer box (20,30).
