Abstract (en)
[origin: WO2009115811A1] A container (1) for the storage of a carbonated drink, comprising a container body with an opening that defines an axis and a removable closure (3) for closing the opening, the closure including a foil (2) for bonding to the container to close the opening in a gas-tight manner, the foil also being connected to, or interacting with, the closure, such that initial rotation of the closure in a loosening direction relative to the container body distorts or deforms the foil in a manner such that further rotation of the closure results in a peel force being applied to the bond between the foil and the container.
