Abstract (en)  
[origin: WO2009127953A1] A device is proposed for attaching the attachment element (12a) of the rubber band (12) of a harpoon with a rubber band to the pole (1) of the harpoon. According to the invention, the device comprises an anchoring device (2) that can be attached to the pole (1) of the harpoon with the rubber band in such a way that the pole (1) extends through the anchoring device and such that the anchoring device (2) can slide along the pole (1), attachment means (6;6') for attaching the attachment element (12a) to the device, and a handle (7;7'), wherein the anchoring device (2) acts in only one direction such that it can slide along the pole (1) in the direction opposite to the direction of action of the opposing force (F) applied by the rubber band (12) but cannot slide in the direction of action of the elastic opposing force (F).
