Abstract (en)

[origin: WO2009127516A1] The invention relates to a method and a device for controlling user dialogues on a technical installation that is to be controlled or to be maintained, for example, a cash dispenser or a deposit refund device. According to said method or said device, a calculating unit evaluates the data relating to the state of the technical installation and in accordance with said data, emits at least one visual request consisting of textual and/or pictorial instructions (INSTR; CHK) for a user who controls the technical installation. The method processes the data using a directed graph (GRPH) comprising nodes (1000,..., 1300...) and edges (INSTR, CHK) connecting the nodes. Said nodes relate to different maintenance conditions of the installation, and the edges relate to the instructions (INSTR; CHK) for the user for transferring the installation from one of the nodes to another node.
