Abstract (en)

[origin: WO2009121082A1] A method for controlling an operating device (1) for illumination means, comprising a controller (10), which can receive digital control commands and with a corresponding shut-off command can disconnect the connected operating devices (1) from the mains, wherein the controller (10) furthermore can receive digital control commands and store the last control command. In addition, the controller (10) can emit the stored commands again following a restart command.
