Abstract (en)

[origin: EP2270296A2] The lock has a lock latch (1) adjusted between a closing position and an open position, and a lock striker (2) engaged with the lock latch. A block element (3) is arranged as a spring-elastic bendable wire or strip and bendable between a locking position and a release position. The block element provided in the locking position stands in blocking engagement with the latch in the closing position. The block element provided in the release position releases the lock latch for adjustment in the open position. A compressor rod is provided for blocking the block element in the locking position.
