Abstract (en)

[origin: EP2270299A1] The carrier has two guiding claws (5, 6) spaced apart from each other along a longitudinal direction of a guide rail (1) of a window lift. A windowpane holder connects a windowpane (2) with the carrier. The windowpane is mounted on the window pane holder. An adjusting device adjusts position and/or orientation of the windowpane with respect to the guide rail, and one of the guiding claws is adjusted perpendicularly to longitudinal extension of the guide rail in a direction extending perpendicular to the windowpane.
