Abstract (en)

[origin: EP2270307A2] The wing (1) has two disks (2,3) arranged at a distance to each other and a mounting profile device (5) aligned to the disk inner space. The mounting profile device comprises an air drying unit cooperating with the disk inner space. The mounting profile device consists of two mounting profiles perpendicular to the plane of the disks, which are connected with each other by an intermediate element. The intermediate element is made of material with small heat conductance value such as glass-fiber reinforced plastic. An independent claim is also included for a method for manufacturing a wing for a door or a window.
