Abstract (en)

[origin: EP2270308A2] The corner joint has two wing spars that are connected with each other coinciding in an angle. A connecting element is an angular fitting part encompassing the corner region. The fitting part forms an angular guidance channel for a thrust element of a connecting rod fitting. Two thrust bearings are adjustable against each other and are attached to a side piece of the fitting part. The recesses or pockets are attached to the spars. An independent claim is also included for a window or a door with corner transmissions.
