Abstract (en)
[origin: EP2270412A1] A spiral heat exchanger (1) including a spiral body (2) formed by at least one spiral sheet wound to form the spiral body (2) forming at least a first spiral-shaped flow channel for a first medium and a second spiral-shaped flow channel for a second medium, wherein the spiral body (2) is enclosed by a substantially cylindrical shell (4) being provided with connecting elements (8a, 8b, 9a, 9b) communicating with the first flow channel and the second flow channel, where the spiral body (2) is provided with at least one fixedly attached divider (3) on its outer peripheral surface, whereupon the at least two shell parts (4a, 4b) are fixedly attached, where the at least one fixedly attached divider (3) creates two separate flow channels between the outer peripheral surface of the spiral body (2) and the substantially cylindrical shell (4).
