Abstract (en)  
[origin: WO2009130130A1] The invention relates to a household appliance, particularly a dishwasher, comprising at least one container (3) for receiving goods to be treated, particularly items for washing, comprising a container opening that can be closed by an appliance door (1) associated at least in sections with stiffening means for increasing the rigidity of the container (3) in the region of the container opening, said means comprising at least one centering element (37) by which the appliance door (1) can be aligned to the container opening when the appliance door (1) is closed. According to the invention, the stiffening means and the at least one centering element (37) are made of uniform material and/or of a single piece as a plastic profile part, particularly in a plastic injection molding process.
