Abstract (en)

[origin: WO2009135632A1] A machining head (10) of a laser machining tool (1) comprises a mechanical connector (14) for connecting the machining head to a component (5) of the laser machining tool, and further comprises a light path connector (15) and/or an electrical connector (16) and/or a fluid connector (17). The provided connectors are designed such that connections can be realized via one or more common relative movements between the machining head (10) and the component (5) of the laser machining tool, including a mechanically rigid connection to corresponding connectors on the component of the laser machining tool.
