Abstract (en)

[origin: WO2009115308A1] The invention relates to a method and a device (2) for processing gravure printing cylinders (4), which have a metal surface, wells, which are engraved into the metal surface, and burrs or ejected material, which arise during engraving of the wells. To remove the burrs or ejected material, the gravure printing cylinder (4) having the engraved wells is immersed in an electrolyte bath (14), in which the burrs or ejected material are electrochemically ablated.
