Abstract (en)

[origin: EP2236933A1] The burner arrangement has a burner hub (18), and a shielding wall (30) that is arranged in a fuel supply duct. The shielding wall is spaced apart from a wall of the fuel supply duct such that an interspace is formed between the wall of the fuel supply duct and the shielding wall. The shielding wall is designed as a hollow body, which is received in the fuel supply duct and adapted to an inner contour of the fuel supply duct. An independent claim is also included for a method for manufacturing burner hub of a burner arrangement.
