Abstract (en)  
The device has a cam segment in which a switching element (10) is guided. The segment has a loop at which a locking recess for the switching element is provided, where the switching element is pre-stressed by a force accumulator i.e. compression spring (63), in a locking position. The locking recess is partially supported in a displaceable and/or pivotable manner, and the switching element is released from the locking position. The recess has two movable parts pre-stressed by a spring in an initial position, rotatable around an axis and movably supported along a linear guide.

Abstract (de)  
Rastbeschlag, insbesondere für eine Auszugsführung (1) eines Schubkastens, mit einer Schaltkurve (20), in der ein Schaltelement (10) geführt ist, wobei die Schaltkurve (20) mindestens eine Schlaufe aufweist, an der eine Rastmulde (26) für das durch einen Kraftspeicher (63) in einer Rastposition vorgespannte Schaltelement (10) vorgesehen ist, wobei die Rastmulde (26) mindestens teilweise verschiebbar und/oder verschwenkbar ist und das Schaltelement (10) aus der verrasteten Position freigegeben werden kann.
