Abstract (en)

[origin: EP2272764A1] The method involves destroying or weakening a sealed seam in a partial manner without sealing at the inner edge in the area of a tear flap. A tear film (12) is arched or raised in an inner area circulating the sealed seam. The tear film is arched or raised in the direction of an upper side facing away from a packaging element (14). An independent claim is also included for an apparatus for sealing a tear film to a packaging element.
