Abstract (en)  
A bicycle bag (1a, 1b, 1c, 1d, 1e, 1f, 1g) which comprises a covering body (10), a main support strap (20, 20f, 20g), a first connection device (30, 30c, 30e, 30g) and a second connection device (40, 40c, 40e, 40g) is disclosed. The major characteristic of the present invention is that the main support strap (20, 20f, 20g), the first connection device (30, 30c, 30e, 30g), and the second connection device (40, 40c, 40e, 40g) are directly or indirectly connected with each other. By means of associating with connection members (15, 16, 31, 32, 41, 42), the first connection device (30, 30c, 30e, 30g) and the second connection device (40, 40c, 40e, 40g) can be fastened to a bicycle (90). Therefore, when the first connection device (30, 30c, 30e, 30g) and the second connection device (40, 40c, 40e, 40g) receive a force from the weight of the bicycle (90), the main support strap (20, 20f, 20g) is capable of bearing such a force.
