Abstract (en)

A zoom lens includes a first lens group (G1) having a positive refractive power, a second lens group (G2) having a negative refractive power, a third lens group (G3) having a positive refractive power, and a fourth lens group (G4) having a positive refractive power, which are disposed in order from an object side, and an aperture stop (AD) disposed at an object side of the third lens group. When changing the magnification from a wide angle end to a telephoto end, an interval between the first and second lens groups increases, an interval between the second and third lens groups decreases, and an interval between the third and fourth lens groups increases. The first lens group includes a negative lens (E1), a positive lens (E2), and a positive lens (E3), in order from the object side. Predetermined conditions of a refractive index of the negative lens (E1) for a d line, an Abbe number for d line, and a relative partial dispersion are satisfied.
