Abstract (en)

[origin: EP2273525A1] The circuit-breaker (10) has two power interrupter terminals (11, 12) that are accommodated in a common circuit-breaker housing (21), and two connection outlets. The circuit-breaker housing has chambers corresponding to the number of interrupter terminals, where the chambers are opened at front ends. The interrupter terminals are arranged in the chambers. The opened front ends of the chambers are closed by dome-like covers (22, 23) to allow a gas connection between the individual chambers by connecting areas produced by the covers. An independent claim is also included for a switchboard section comprising a bus bar housing.
