Abstract (en)

[origin: WO2009121591A2] A container for handling bulk material comprising a sheet of material defining a base panel and a plurality of side wall panels separated from the base panel by a plurality of fold lines, said sheet being foldable about said fold lines into an erected configuration wherein said side wall panels extend upwardly from said base panel to define an open topped receptacle for holding bulk material, an external framework being provided for supporting the sheet in its erected configuration, said sheet being collapsible to a collapsed configuration to facilitate emptying of said receptacle.
