Abstract (en)

[origin: WO2009121477A1] The present invention relates to a method and a device for filling in particular large-volume containers (1) with a liquid, particularly a gas-containing drink. The liquid is added with a predefined flow speed. According to the invention, the current flow speed is predefined as a function of one or more simultaneously measured parameter values and in combination with the speed values associated with the parameter values of at least one prior filling process.
