Abstract (en)

[origin: WO2009135545A1] The measurement probe according to the invention comprises a hollow member (5). A fluid can flow through the hollow member, wherein two sections of a wall of the hollow member form electrodes (6) for a capacitive and/or resistive measurement, and the electrodes (6) are made of a conductive plastic. The measurement probe can be used in a fuel feed line. A method of manufacture is also provided.
